CIS 432/532 Introduction to Computer Networks
Fall 2001

Program #2 Survey

1. Identification
Print clearly.

Name		CS Username

2. Program Status

Check the boxes below to indicate which functions your program performs properly.

Basic Requirements

☐ Program includes a Makefile and compiles.

☐ Arguments are parsed properly and illegal arguments handled cleanly.

Protocol Correctness

☐ All chat functionality works as in Program #1, your client talks with your server.

☐ Client can receive messages split across a buffer ("one character" test).

☐ Server can receive messages split across a buffer ("one character" test).

☐ Client can receive multiple messages in a buffer ("extra" test).

☐ Server can receive multiple messages in a buffer ("extra" test).

☐ Client can receive long messages.

☐ Server can receive long messages.

3. Comments

If your program doesn't work properly, please describe in more detail what is wrong. Use the back if you need more space.
