

CIS 432/532 Introduction to Computer Networks

Winter 2001

Program #2 Survey

1. Identification

Print clearly.

Undergraduate

Graduate

Name

CS Username

2. Program Status

Check the boxes below to indicate which functions your program performs properly.

Program written in: Java C

Functionality

- Program compiles.
- Program includes a README file and a Makefile or compile script.
- Sends mail.
- Handles addresses of the form zappala@cs.uoregon.edu.
- Handles addresses of the form zappala.
- Handles bad addresses gracefully (it gives an error message to the user and allows the user to correct the address).
- Handles more than one address on the TO line.
- Handles more than one address on the CC line.
- Handles multiple lines in the message body.
- Extra credit: handles extra reply codes. You must include info in your README file explaining how I can use your client to test this functionality. Attach your README file to the survey.
- Extra credit: Formats mail using some of the message lines given in RFC 822. You must include info on which lines you implement in your README file. Attach your README file to the survey.

3. Comments

If your program doesn't work properly, please describe in more detail what is wrong. Use the back if you need more space.
