### User Documentation

(Chapter 8 Rosson & Carroll)

---

---

---

---

---

---

---

---

### Cartoon for the Day

---

---

---

---

---

---

---

---

### User Documentation

- Definition: Stored information about how to use a system
- One size does not fit all!
  - Needs vary with knowledge level and goals of user
    - new user trying to learn system
    - casual user trying to remember command
    - experienced user recovering from errors
    - experts needing advanced options
    - users needing confirmation that a function works properly

---

---

---

---

---

---

---

---

## Universal Thought

- Nobody reads documentation, nobody writes documentation, but everybody needs documentation!

---

---

---

---

---

---

---

---

## Paper vs. Online Documentation

- Paper Advantages
  - Highly portable
  - Easy to scan at varying levels of detail
  - Allows annotation
  - Familiarity
  - Quality of text best (25% more readable than on-line)
    - reading faster
    - can display more text
  - People like owning books
- On-line Advantages
  - Does not take physical space
  - Easy to find
  - Rapid search by keywords
  - Rapid page turning with links, scroll bar or table of contents

---

---

---

---

---

---

---

---

## Overall Approaches

- Systematic documentation
  - Complete documentation of tasks
  - Sequential and explanatory
- Minimalism
  - Learning by doing
  - Work with familiar examples
  - Anticipate and manage errors

---

---

---

---

---

---

---

---

## Types

- Information in the interface
- On-line help manuals
- Tutoring
- On-line user forums

---

---

---

---

---

---

---

---

## Information in the Interface

- Error messages & input prompts
- Short-cuts for commands
- Balloon help

---

---

---

---

---

---

---

---

## Advice to write better messages

- Make the message specific
  - Explain the error
  - Give the context
- Make the message action-oriented
  - Tell the user what to do
  - Use the labels on buttons in the message
  - Maintain consistency with similar functions

---

---

---

---

---

---

---

---

## System message: Specific and action-oriented

---

---

---

---

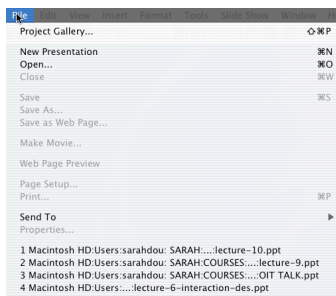

---

---

---

---

## Short cuts in menus

---

---

---

---

---

---

---

---

## Balloon Help

---

---

---

---

---

---

---

---

## On-line help Manuals

- Reference Manuals
  - System vs. application
  - User access
    - Search
      - Search by keyword
    - Browse
      - Table of contents
      - Index
  - Contents

---

---

---

---

---

---

---

---

## Advice to write better manuals

- Use consistent language between pages and within the same page
- Be concise in your language
- Use familiar language and images
  - “Speak the user’s language!!!!!!”
- Coordinate text, labels, images & error management

---

---

---

---

---

---

---

---

## Coordinating text, labels, images & error management (Kai’s Power GOO)

Select a GOO brush and apply the effect directly to your image with your cursor.

**Reset** Reset removes all GOO effects from your image.

**Grow/Shrink** Painting with Grow/Shrink in a clockwise motion enlarges the painted area of the image. Painting in a counter-clockwise motion shrinks the painted area.

**Move** One of four “push” brushes. Move has the largest area of effect but the least pressure. Use it to create subtle distortion effects.

**Smear** Smear is smaller than Move and exerts a high level of distortion pressure for creating quick, dramatic distortions.

**Smudge** Smudge affects a slightly smaller area than Smear, but with decreased pressure. Use to create small, subtle distortion effects.

**Nudge** The extremely small size and high pressure of Nudge makes it useful for creating a finger-painting effect.

**Mirror/Toggle** When Mirror/Toggle is active, brushstrokes are mirrored along the vertical axis.

**Smooth** Smooth gradually and selectively undoes the distortion effects of the GOO brushes.

**UNGOO** UNGOO quickly undoes the distortion effects of the GOO brushes. It is the ultimate “selective undo” brush.

## Acrobat pdf file Manuals

- “.pdf” file
- Universally read by Adobe Acrobat Reader
  - Free download from web
- Created by Adobe Acrobat from text files
- Functionality
  - Print
  - Available off-line from software
  - Search by keyword
  - Table of Contents
  - Index
  - Bookmarks

---

---

---

---

---

---

---

---

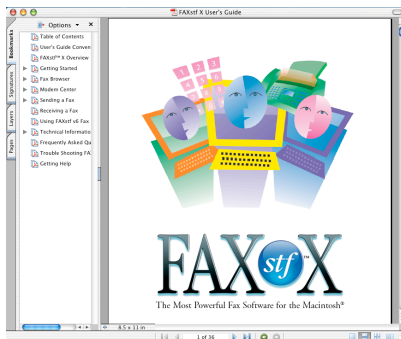

---

---

---

---

## Acrobat pdf file manual

---

---

---

---

---

---

---

---

---

---

---

---

## Web Browser html file Manual

- “.html” file
- Universally read by any Web Browser
  - Free download from web
- Created by applications from text files
- Functionality
  - Print
  - Available off-line from software
  - Search by keyword
  - Table of Contents
  - Index
  - Bookmarks

---

---

---

---

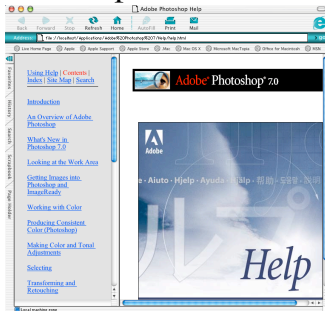

---

---

---

---

## Internet Explorer html manual

---

---

---

---

---

---

---

---

## On-line Manual Contents

- Table of Contents
- Overview of System
- Getting Started
- Major Functions explained by how to do it
- Technical Information
- Frequently Asked Questions
- Trouble-shooting FAQs
- Index

---

---

---

---

---

---

---

---

## Tutoring

- Types
  - “Getting started” manual
  - Interactive tutorial
  - Embedded demonstration
  - Intelligent tutoring

---

---

---

---

---

---

---

---

## “Getting started” Manual

- Overall picture of interface
  - “parts” description labeled with functions
- Procedural
  - Focus on core (most frequent and necessary) tasks
  - Step by step
  - Assumes no errors made
- List of common problems

---

---

---

---

---

---

---

---

## Interactive Tutoring

---

---

---

---

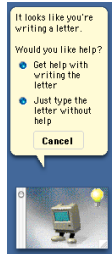

---

---

---

---

## Embedded Demonstration: Microsoft WORD agent

---

---

---

---

---

---

---

---

## Intelligent Tutoring

- AI system
  - Expert's model
    - Representation of knowledge to teach
  - Student's model
    - Representation of student's knowledge
    - Difference between expert and student guides teaching
  - Heuristics about how to teach
    - Coach
    - Direct teaching
    - Drill and practice
- Experimental

---

---

---

---

---

---

---

---

## On-line user forums

- Discussion groups
  - News groups
  - Chat rooms
- Frequently asked questions (FAQ)
- Web-based tech support
  - Email
  - Chat

---

---

---

---

---

---

## Newsgroup Help

**Subject:** Re: Extracting frame from .asf file  
**Date:** Thu, 23 May 2000 13:42:14 +0200  
**From:** "Alessandro Angelini" <a.angelini@sogetel.it>  
**NewsGroups:** microsoft.public.windowsmedia.sdk  
**References:** 1, 2, 3, 4, 5, 6, 7

Actually I have never wrote a video rendered, so I can not be of much help in that.

Anyway you might try to write an in-place transform filter which takes the uncompressed RGB frames as input and just passes them along. When you have got old of the frame bitmap, you can save the picture. You can attach one of provided video renderers to its output pin just to terminate the graph, or you might write a very basic renderer that just sinks the data without doing anything with it.

"Floyd Mueller" <muellem@pal.xerox.com> wrote in message [new:027E98438A.2192@pfebbhead3...](mailto:027E98438A.2192@pfebbhead3...) ...  
> So far, I am trying to understand the sample video  
> renderer that comes with the SDK. (The one that  
> displays the video in the shape of the word "active").  
> I admit, for me it sounds a bit very complicated, and  
> most of the time, it does not what I want it to do.

## Issues in providing good help

- Relate to the user's context
  - What is the user doing?
- Help is often used while performing a task
  - User must switch between the help windows and the application
- Multiple formats for multiple needs and users
