CIS 443-543: User Interfaces
Fall 2009
Presentations for Final Project

Due December 8, 2009 8:00-10:00am Deschutes 200.

During our two-hour meeting for the "final" for this course, each team will present its final project to the rest of us.

For this final class you will actually give a formal presentation of what your final project is. The presentation should be a maximum of 15 minutes long. You may choose one person to give this presentation or you may present it as a group.

This presentation is a mini-version of your final report for the project. I would expect it to integrate all aspects we've focused on: requirements analysis with user studies, prototyping of the design with usability evaluation, and an implemented UI including a demo of the UI.

For the presentation, you should have these four parts:

1) Brief overview of the overall concept, the user studies, the users, the core functionality and usability requirements. (2 minutes)

2) A description of the user interface in terms of its presentation (3 minutes)

3) A narrative of one interesting core function. If you have a working computer prototype, you can "walk" us through this, or you can give a storyboard with drawings or screen mockups. (5 minutes)

3) Description of the usability testing you have done, what you found, and how you addressed this in the design. (5 minutes)

You may use Powerpoint or any other presentation software. If you want to bring your own laptop we can hook that up. Or if you want to use my Mac, let me know in advance sot we can put the software on it.
