

CONCERNLINES: A Timeline View of Co-occurring Concerns

Christoph Treude, Margaret-Anne Storey
 Department of Computer Science, University of Victoria

Which components were affected by improvements on user experience?

Which components played a major role during the last beta release?

Which non-functional requirements co-occurred with work on the user interface?

Visualize co-occurrence of concerns over time to support the cognitive process of identifying how concerns manifest across different dimensions

Concerns

are interests which pertain to the system's development, its operation or any other aspects that are critical or otherwise important to one or more stakeholders
