DYVISE: Performance Analysis of Production Systems

Steven Reiss
Brown University

CONTROLLED
- User settable overhead
- Dynamic attach and detach
- Dynamic enable and disable
- Interval-based & cumulative analysis
- Time travel over the run
- User set marks
- Multiple processes on multiple machines
- User requested heap dumps/GC

DETAILED
- Overview, high-level and low-level details
- Multiple performance aspects
- Priority-based, automated detailing
- Combines stack sampling and instrumentation
- Heap ownership visualization
- Time view with summaries and fish-eye detailing
